

WESTERN MEDITERRANEAN DELUGE

Morocco Flood Crisis — January/February 2026

Gharb–Loukkos Basins | NW Morocco

WATER INFLOW TO MOROCCAN DAMS

THE HUMAN COST

188 000	persons displaced
40 000	across 4 provinces
5	in tent camps near Kenitra
110 000+	blue tents livestock separated
\$328 M	confirmed dead (Tetouan)
DREF	family swept away incl. 2-year-old
	hectares submerged
	cereal sugar beet citrus
	government relief package
	~10% earmarked for farmers
	IFRC emergency mechanism
	Red Crescent deploying across 4 provinces

VOICES FROM THE CAMPS

- “The water took everything.”
- Ibrahim Bernous, 32, camp near Kenitra
- “We have no grain left to feed our livestock, and they are our main source of income.”
- Chergui al-Alja, 42

FLOOD CHRONOLOGY

- Sep 2025: Record rainfall season begins in NW Morocco
- Jan 28: Dam inflows surge; reservoirs exceed capacity
- Feb 2–3: Ksar El Kebir evacuated — 50 000 flee
- Feb 4: 108 000 evacuated across 4 provinces
- Feb 8: Storm Marta: Tetouan flash flood, 5 dead
- Feb 11: 8.8 bn m³ inflow recorded — 2 yr in 1 mo
- Feb 13: Royal relief order: MAD 3 bn (\$328 M)

WATER	8.82 × 10⁹ m³ inflow in one month ≈ 2 years combined on drought-degraded soils: max runoff, min infiltration
SOIL	110 000+ ha waterlogged: topsoil stripping, salinization risk in coastal lowlands; restoration: months to years
AGRI	7-year drought depleted reserves; flood destroyed current + next season capacity; price spike cycle repeats
TRADE	Spain + Morocco = 58% UK tomatoes, 72% cucumbers, 75% sweet peppers in winter; Strait transport disrupted
PEOPLE	188 000 displaced (rainfed smallholders + pastoralists): structural vulnerability to next drought–deluge cycle
