

WESTERN MEDITERRANEAN DELUGE

Morocco Flood Crisis — January/February 2026

Gharb–Loukkos Basins | NW Morocco

WATER INFLOW TO MOROCCAN DAMS

THE HUMAN COST

188 000	persons displaced
	across 4 provinces
40 000	in tent camps near Kenitra
	blue tents livestock separated
4	confirmed dead
	incl. 2-year-old 1 missing
110 000+	hectares submerged
	cereal sugar beet citrus
\$328 M	government relief package
	~10% earmarked for farmers
CHF 1.6 M	IFRC emergency appeal
	Red Crescent operations

VOICES FROM THE CAMPS

“The water took everything.”

— Ibrahim Bernous, 32, camp near Kenitra

“We have no grain left to feed our livestock,
and they are our main source of income.”

— Chergui al-Alja, 42

WATER 8.82 × 10⁹ m³ inflow in one month ≈ 2 years combined on drought-degraded soils: max runoff, min infiltration

SOIL 110 000+ ha waterlogged: topsoil stripping, salinization risk in coastal lowlands; restoration: months to years

AGRI 7-year drought depleted reserves; flood destroyed current + next season capacity; price spike cycle repeats

TRADE Spain + Morocco = 58% UK tomatoes, 72% cucumbers, 75% sweet peppers in winter; Strait transport disrupted

PEOPLE 188 000 displaced (rainfed smallholders + pastoralists): structural vulnerability to next drought–deluge cycle

LEGEND

	Crisis city		Flood extent
	Displacement camp		River
	Provincial hub		Supply chain disruption
	Context city		Displacement flow
	Dam
