

WESTERN MEDITERRANEAN DELUGE

Morocco Flood Crisis — January/February 2026

Gharb–Loukkos Basins | NW Morocco

WATER INFLOW TO MOROCCAN DAMS

THE HUMAN COST

188 000 persons displaced

across 4 provinces

40 000 in tent camps near Kenitra

blue tents | livestock separated

4 confirmed dead

incl. 2-year-old | 1 missing

110 000+ hectares submerged

cereal | sugar beet | citrus

\$328 M government relief package

~10% earmarked for farmers

CHF 1.6 M IFRC emergency appeal

Red Crescent operations

VOICES FROM THE CAMPS

“The water took everything.”

— Ibrahim Bernous, 32, camp near Kenitra

“We have no grain left to feed our livestock, and they are our main source of income.”

— Chergui al-Alja, 42

“All the grain was lost, and the water took everything.”

WATER 8.82 × 10⁹ m³ inflow in one month ≈ 2 years combined on drought-degraded soils: max runoff, min infiltration

SOIL 110 000+ ha waterlogged: topsoil stripping, salinization risk in coastal lowlands; restoration: months to years

AGRI 7-year drought depleted reserves; flood destroyed current + next season capacity; price spike cycle repeats

TRADE Spain + Morocco = 58% UK tomatoes, 72% cucumbers, 75% sweet peppers in winter; Strait transport disrupted

PEOPLE 188 000 displaced (rainfed smallholders + pastoralists): structural vulnerability to next drought–deluge cycle
