

WESTERN MEDITERRANEAN DELUGE

Morocco Flood Crisis — January/February 2026

Gharb–Loukkos Basins | NW Morocco

WATER INFLOW TO MOROCCAN DAMS

THE HUMAN COST

188 000	persons displaced
	across 4 provinces
40 000	in tent camps near Kenitra
	blue tents livestock separated
5	confirmed dead (Tetouan)
	family swept away incl. 2-year-old
110 000+	hectares submerged
	cereal sugar beet citrus
\$328 M	government relief package
	~10% earmarked for farmers
DREF	IFRC emergency mechanism
	Red Crescent deploying across 4 provinces

VOICES FROM THE CAMPS

- “The water took everything.”

— Ibrahim Bernous, 32, camp near Kenitra
- “We have no grain left to feed our livestock, and they are our main source of income.”

— Chergui al-Alja, 42

WATER	8.82 × 10 ⁹ m ³ inflow in one month ≈ 2 years combined on drought-degraded soils: max runoff, min infiltration
SOIL	110 000+ ha waterlogged: topsoil stripping, salinization risk in coastal lowlands; restoration: months to years
AGRI	7-year drought depleted reserves; flood destroyed current + next season capacity; price spike cycle repeats
TRADE	Spain + Morocco = 58% UK tomatoes, 72% cucumbers, 75% sweet peppers in winter; Strait transport disrupted
PEOPLE	188 000 displaced (rainfed smallholders + pastoralists): structural vulnerability to next drought–deluge cycle
